7. PACKAGING - TAPE & REEL

Reels are shipped with desiccants in heat-sealed inner moisture-proof bags.

Inner moisture-proof bags are shipped with desiccants in heat-sealed outer moisture-proof bags.

Outer moisture-proof bags are packed in cardboard boxes with corrugated partitions.

- * The Label shows: P/O NO., TYPE, QTY, IV, VF, WLD.
- * Products shipped on tape and reel are packed in moisture-proof bag. They are shipped in cardboard boxes to protect them from external forces during transportation.
- * Do not drop or shock the box. It may damage the products.
- * Do not expose to water, the box is not water-resistant.
- * Using an original packaging material or equivalent in transit is recommended.

8. MOISTURE PROOF PACKAGE

- When moisture is absorbed into the SMT package it may vaporize and expand during soldering. There is a possibility that this can cause exfoliation of the contacts and damage the optical characteristics of the LEDs. For this reason, the moisture proof package is used to keep moisture to a minimum in the package.
- The moisture proof package is made absorbent material (silica gel desiccants) is inserted into the aluminium moisture proof bag.
- The silica gel desiccants change from blue to red if moisture had penetrated bags.

9. STORAGE CONDITIONS

• Storage Conditions

Before opening the package:

The LEDs should be kept at 30℃ or less and 90%RH or less.

The LEDs should be used within a year.

When storing the LEDs, moisture proof packaging with absorbent material (silica gel desiccants) is recommended.

• After opening the package:

The LEDs should be kept at 30° C or less and 70%RH or less.

The LEDs should be soldered Within 168 hours (7 days) after opening the package. if unused LEDs remain, they should be stored in the moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel desiccants). It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

• If the moisture absorbent material (silica gel desiccants) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following condition.

Baking treatment: more than 24 hours at 65° C

• Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

10.STATIC ELECTRICITY

• Static electricity or surge voltage damages the LEDs.

It is recommended that a wrist band or an anti-electrostatic glove be used when handing the LEDs.

• All devices equipment and machinery must be properly grounded. It is recommended that precautions be taken against surge voltage to the equipment that mounts the LEDs.
