## 6. SOLDERING

- Recommended Reflow Soldering Condition(Lead-free Solder)

- Recommended Hand Soldering Condition

Temperature	350°C Max
Soldering Time	3sec Max

- \* This LED is designed to be reflow soldered on to a PCB. If dip soldered, Multi Color cannot guarantee its reliability.
- \* Reflow soldering must not be performed more than twice. Hand soldering must not be performed more than once.
- \* Avoid rapid cooling. Ramp down the temperature gradually from the peak temperature.
- \* Nitrogen reflow soldering is recommended. Air flow soldering conditions can cause optical degradation, caused by heat and/or atmosphere.
- \* Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-heat soldering iron should be used.

It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

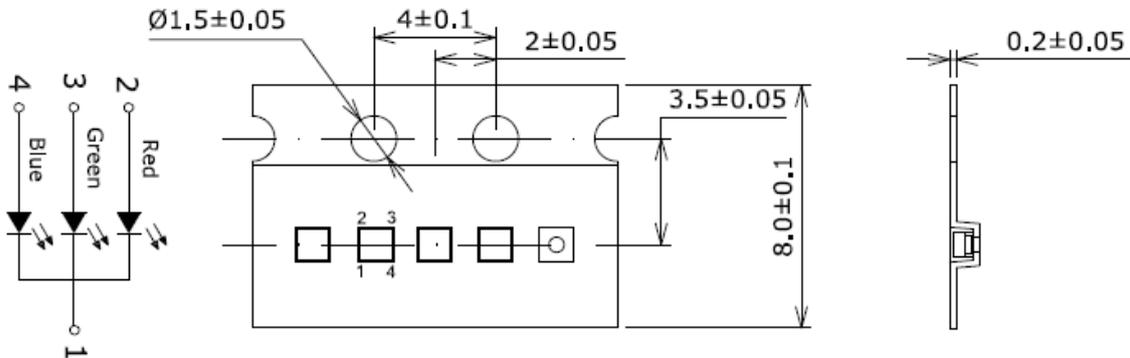

- \* When soldering, do not apply stress to the LED while the LED is hot.
- \* This product can differ in optical characteristics depending on the number of reflow cycles.

In a single display, only LEDs with same number of reflow cycles should be used regardless of the application type, such as rental and/or permanent installations.

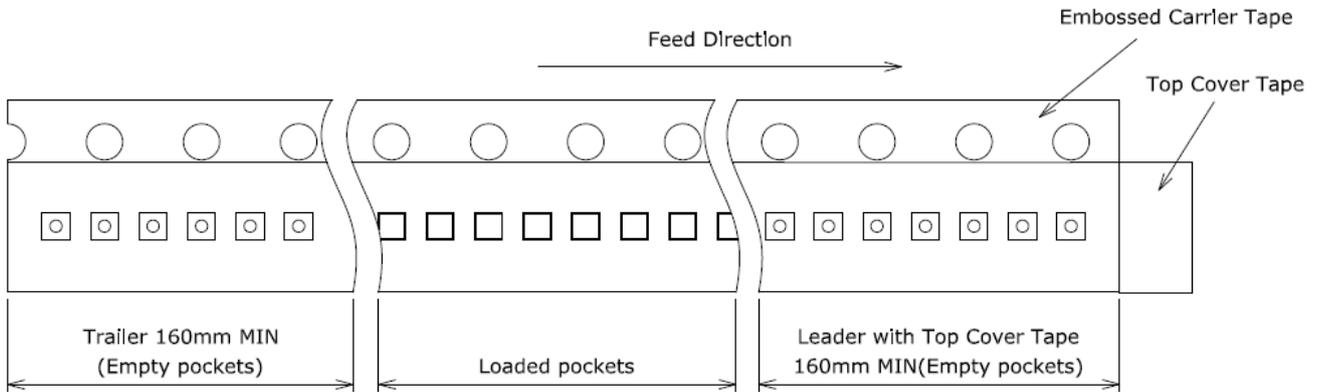

## 7. TAPE AND REEL DIMENSIONS

Tape:

Trailer and Leader:

Reel:

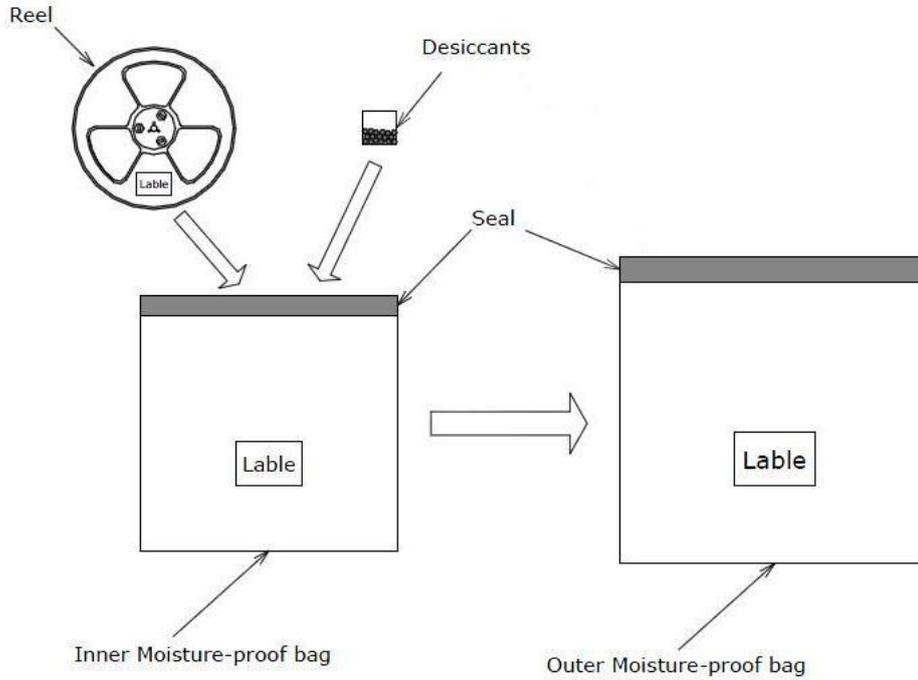

Quantity per reel=9000pcs

Quantity per reel=30000pcs

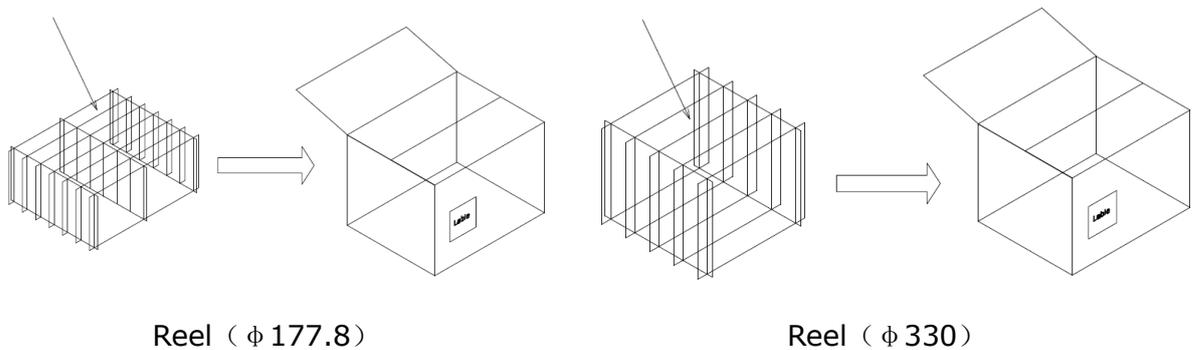

## 8. PACKAGING – TAPE & REEL

Reels are shipped with desiccants in heat-sealed inner moisture-proof bags.

Inner moisture-proof bags are shipped in heat-sealed outer moisture-proof bags.

Outer moisture-proof bags are packed in cardboard boxes with corrugated partitions.

\* The Label shows: P/O NO., TYPE, QTY, IV, VF, WLD.

\* Products shipped on tape and reel are packed in moisture-proof bag.

They are shipped in cardboard boxes to protect them from external forces during transportation.

\* Do not drop or shock the box. It may damage the products.

\* Do not expose to water, the box is not water-resistant.

\* Using an original packaging material or equivalent in transit is recommended.

## 9. STORAGE CONDITIONS

- Before opening the package, must check if the package bag is well packaged or damaged.  
If the package is damaged, please return back to Multi-Color.
- After opening the package:  
After this bag is opened, devices that will be subjected to infrared reflow, vapor-phase reflow, or equivalent processing  
Must be:
  - a) Mounted within 168 hours at factory condition of  $\leq 30^{\circ}\text{C} / 60\% \text{RH}$ .
  - b) If unused LEDs remain, please return these LEDs back to Multi-Color.
- The LEDs must be used within 6 months.  
The LEDs should be kept at less than  $30^{\circ}\text{C}$  and less than  $60\% \text{RH}$ .

## 10. STATIC ELECTRICITY

- Static electricity or surge voltage damages the LEDs.  
It is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- All devices equipment and machinery must be properly grounded. It is recommended that precautions be taken against surge voltage to the equipment that mounts the LEDs.

## 11. Thermal Management

- Thermal design of the end product is paramount importance.  
Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.
- The drive current should be decided after considering the ambient maximum temperature ( $T_a$ ) of LEDs.

## 12. Safety Guideline for Human Eyes

- The international Commission (IEC) published in 2006 IEC 62471:2006 Photobiological safety of lamps and lamp systems which includes LEDs within its scope.
- Following IEC 62471:2006, most of Multi-Color LEDs can be classified as belonging to either Exempt Group or Risk Group
  1. Optical characteristics of a LED such as output power, spectrum and light distribution are factors that affect the risk group determination of the LED. Especially a high-power LED, that emits light containing blue wavelengths, may be in Risk Group
  2. Great care should be taken when viewing directly the LED driven at high current or the LED with optical instruments which may greatly increase the hazard to your eyes.
